

PROJECT ENGINEER

This is an interesting and varied role, which involves working on some excellent engineering projects, bringing fantastic prospects for the right candidate within a rapidly expanding modern company.

The skills required for this post are as follows:

- Engineering and fabrication background.
- Good knowledge of all welding techniques.
- Good communication skills and the ability to liaise closely with customers.
- Ability to work under pressure both alone and part of a team.
- Ability to handle multiple varied projects from order through to completion.
- CAD qualifications and experience are required for this role but training will be provided where necessary.
